Comprehension: Read the passage and answer the questions that follow. A school teacher's day starts much before the first class and continues even after the last bell rings. Before teaching, the teacher must plan lessons, choose materials, and think about the different learning needs of students. Once school begins, the teacher handles many roles—teaching lessons, guiding students, maintaining discipline, and listening to their problems, sometimes all in one hour. Teaching requires not only subject knowledge but also understanding students' emotions, because every student reacts differently to praise, warnings, or correction. Apart from teaching, teachers also have many administrative tasks. They check notebooks, keep records, attend meetings, and work with other teachers to ensure smooth learning. These tasks must be done carefully because even small mistakes can affect students later. Teachers also talk to students outside the classroom, offering advice during short conversations that can influence them deeply. By the end of the day, teachers think about what went well and what needs improvement. This cycle shows that teaching is a job of commitment, not just routine. Each day may look similar, but it is filled with continuous thinking and emotional effort.
